Another software called VideoStudio has been gaining popularity and has been on our top software picks list regularly. If you are looking for video editing software to create videos, check out the list below. VideoStudio lets you edit your videos through one of two interfaces: a simple wizard or a timeline. The timeline is fairly easy to work with, and features one-of-a-kind transition effects and a drag-and-drop interface, but does not come with built-in effects like Photoshop or premiere pro. The workflow is pretty straightforward and anything you would find in any video editing software can be found in VideoStudio. A good piece of advice is to not try and recreate complex effects in your videos. It is okay to say you want to create a green screen effect, but don't try and make the grass green in every frame.

VideoStudio is a bit different than other video editing software in the sense that it is a tool that uses an interface similar to a graphic design program like PowerPoint or Photoshop. This means that you can manipulate your video without having to make a timeline. But keep in mind that you don't get the undo/redo feature, which can be a plus or a minus depending on your skill level. The interface to VideoStudio doesn't give you too many options on different sorts of effects. There are built-in effects like titles, effects, transitions, audio effects, and a video effects library. VideoStudio Ultimate 2020 also comes with more than 100 built-in special effects. With that said, the video effects library is the sort of collection where you can find exactly what you are looking for. VideoStudio's interface is very simple, but you can add custom effects and video transitions to change the presentation. You can also use transitions, titles, and audio effects. The VideoStudio feature you are probably most likely to use is the video editor. You can add titles to your video, import a video, add effects, add in camera and microphone audio. It also includes built-in webcam effects. The workflow is simple. You select the video, edit it, and then save it. You can save the video to any format like AVI, MP4, MOV, WMV, WebM and more. There are different types of video you can use, like whiteboard videos, videos of yourself, and live broadcasts. Corel VideoStudio is a popular, easy-to-use video editing software.
