Java is a software platform built around a standard programming language and a set of libraries. javaDAW is a Java-based music sequencer or Digital Audio Workstation that can work with multiple tracks at the same time. The application comes with a built-in audio keyboard and a metronome. A great tool for newcomers The resource allows one to create MID or WAV sounds and is, therefore, of interest to anyone producing music. Since the program caters for a wide range of needs, both basic and intermediate song creators will find it quite useful. An alternative use could be in teaching children the basics of music-writing. The interface is well-suited to the task at hand, as the main window is divided between multiple frames that each control certain aspects of music crafting. A good number of menu items are present, but their functions are largely simple and intuitive. Newcomers will find the GUI quite pleasant, more-so since similar products tend to have a cluttered interface. Can load prerecorded and live sounds As an intermediate-level music sequencer, javaDAW can receive source sounds either from instruments connected to the computer (MIDI in) or from prerecorded elements. Regardless of their origin, the samples can then be loaded into separate tracks and mixed in order to generate a melody. Users are free the manipulate the audio parameters of each track (e.g. by establishing solos or changing the volume). Track items can also be adjusted; for instance, one can stretch individual notes, or merge clips. Output formats are MID and WAV A built-in keyboard and a metronome can assist with fine-tuning tracks. Once all musical elements are in place, users can export the project to either MID or WAV formats. A few more popular output file-types would be a nice touch (for example, MP3s). To sum up, javaDAW is a good toolkit for basic to intermediate-level musicians that want to compose their own melodies. The music arose in poor working class districts of Argentina. By the 1920's Argentina was exporting tango to Europe and America and thousands of tango bands had sprung up, each with a lead singer. Composer Artur Pizarro was one of these lead singers. Pizarro wrote a number of tango classics including Las dos Caras and El Tango Argentino. Pizarro was the first "star" of tango. He had an engaging personality and made his first big name for tango, the simple single "La bien gana que bien pierde", which was featured in a 1920's Argentine movie. It has alot of bugs and it's not even close to the best sequencer out there. There's even a bug that makes it impossible to save projects sometimes. So far the best thing about it is that it doesn't have alot of features that you have to pay for. But it's not a fully featured sequencer. Description: Project description
