Create a list of Word Document Create a list of Word Document Key Description: The Key macro allows you to automate the repetitive task of creating a list of documents. The macros are placed inside the form controls of the New Document button, and its action contains a few required parameters. Key macros are usually required for additional operations, such as sorting or filtering of the list items. The macro interface can be arranged in any convenient way. The View is used for the display of the data and its processing. Actions of the macro include: - Displaying data in a table. - Separating the data in columns and rows. - Displaying data in the format of a list. - Printing the data. Features of the Key macros: - Separate data is automatically added to the list. - Data can be sorted in the list. - Data can be filtered. - A custom name can be given to the output file. - The text can be saved in the current document or in a separate file. - The size of the table is automatically determined. - The number of columns can be automatically calculated. Batch Word Document Splitter can be a suitable solution when you need to divide a Word document into separate one-page files. The program can perform the task in a short time and supports managing several files at the same time. Moreover, it can support various types of documents and text files. Prepare the list of files for processing Batch Word Document Splitter allows you to add several files to the list, from different folders, as well as to load all the items in a single directory. You can easily manage the contents of the list by adding or removing files. The program displays the names of the documents, along with their paths and a dedicated field for logging the result of the splitting process. You can add documents created with earlier versions of Microsoft Word (2003 or earlier), as
